

Urban Floating Containment Boom

Working together for
a positive outcome

Urban Floating Containment Boom

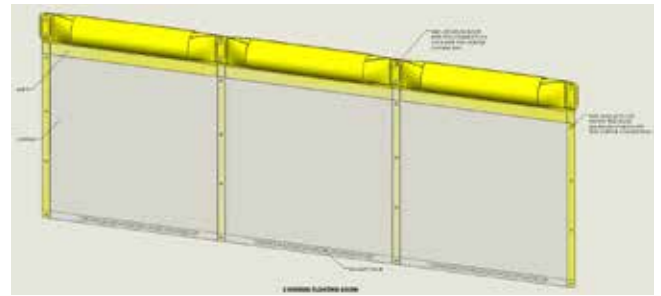

At Urban Asset Solutions Pty Ltd we are passionate about protecting our oceans and waterways from urban pollution. We pride ourselves on providing quality products and services that help sustain and enhance the environment in which we live and the communities in which we operate. We do this by working in close consultation with you, our clients to find the best and most cost efficient solution for your current stormwater management project.

We are very pleased to announce the release of our innovative “Urban Floating Containment Boom” designed specifically for retention of urban pollutants within our waterways.

Innovative Design

Our modular floating containment boom is designed specifically to control and contain debris, free floating hydrocarbons, turbidity and aquatic weeds in many types of waterways including ponds, rivers, lakes, channels and canals. The floating boom will control and contain the migration of noxious water weeds, urban litter and debris within your waterbody.

The Urban Floating Containment Boom is suitable for permanent or temporary installations and is manufactured from durable, robust high quality materials such as UV Resistant HDPE, UPVC vinyls with stainless steel fixings and ballast chains. All materials are carefully selected for their intended purpose.

Modular System

The Urban Floating Containment Boom is a modular boom system consisting of easily connecting 1.2m increments. Easily joined on site it can be tailored to suit your exact overall length with varying stainless steel 316 anchor and fixings incorporated into the design specific to your proposed site requirements. Our experienced team will work collaboratively with you to design, manufacture and install the most appropriate system for your site.

Optional Silt and turbidity curtains

At Urban Asset Solutions we are able to manufacture the Urban Floating Containment Boom with silt and turbidity curtains of varying depths and material ranging from 1500 - 200 micron depending on the application. Anchoring systems and curtain ballast chains will vary for each application.

Optional adjustment for Floating Boom Curtains

Reefing lines, also known as furling lines, are an excellent addition to silt and turbidity curtains for areas where varying water depths or uneven pond floors require adjustment to the individual curtains. These reefing lines allow each curtain module to be adjusted to suit varying depths.

Optional Skirt Depth

At Urban Asset Solutions we can design your floating boom with optional skirt depths depending of the application and target pollutant containment required.

Urban Floating Containment Boom Key Benefits and Features

- Locally designed and manufactured, quality product
- Modular Systems for easy on site adjustment and installation
- Durable and robust product designed for the harsh Australian environment
- Internationally trusted name is stormwater management products and services
- Customisable design to suit every project application

Contact your local Urban Asset Solutions office for a no obligation free product quotation or for assistance in designing an appropriate floating boom solution for your next project.
